ABOUT ME

In my free time I'm building an automated system for creating and publishing short vertical videos. An AI agent that turns an idea into a video - script, scenes, voice-over and subtitles - already works. Its output is checked by code, and a human makes the key decisions. The agent is also my final thesis at Vilnius University of Applied Sciences.

I've always enjoyed automating things: before my first commercial job I wrote Python scripts that collected flat and car listing data for analysis. I've been programming for about 2.5 years (React, TypeScript, C# .NET). I build systems for clients, from working out the requirements to launch. Before IT I worked as a transport planner at Girteka, so I understand working with KPIs and across departments.

TECHNOLOGIES

Analysis
Requirements, UML, Technical specifications, User guides, Figma

AI and automation
AI agents, LLM output with Zod, Gemini, Claude Code, ElevenLabs, Python (Scrapy, Selenium)

Frontend
React, TypeScript, Next.js, Tailwind CSS, RTK Query, TanStack Query, Zustand

Backend and DB
C# / .NET, Node.js, tRPC, REST / OpenAPI, PostgreSQL, SQL Server, Supabase

Other
React Native, WPF, Vitest, Playwright, xUnit, Git

LANGUAGES

Lithuanian	native
English	B2
Russian	B2

Gabrielė Tamaševičiūtė

Developer and systems designer · AI agents and automation

Vilnius

EXPERIENCE

Mar 2026 – present — **Developer (Mid), UVS**
Internal business system from scratch, lead frontend developer in the team: requirements analysis, architecture and interface, specifications and tasks for the backend developer, reviewing the result

Mar 2025 – present — **Freelance developer (Code art)**
Systems for clients from working out the requirements to launch: requirements, architecture, development, user guides

Jun 2024 – Feb 2026 — **Junior developer, UVS**
C#/.NET, WPF: screens and features, bug analysis from logs, screen design and accessibility

2021-2023 — **Earlier experience**
Transport planner (Girteka): priorities, KPIs, work across departments; administrator (Jarinta)

SELECTED WORK

TikMaker: AI agent and video editor

An AI agent that turns an idea into an editable short vertical video project, and an editor to review it.

The agent calls an LLM (Gemini / Claude) step by step, checks every answer with a Zod schema and rules in code, and code builds the project; a human approves the hook and the script.

Role: solo, the whole project; final thesis

Work: analysis (88 videos, 7 similar systems), requirements, architecture and UML, documentation, testing

`React · TypeScript · Remotion · tRPC · Zod · Gemini / Claude · ElevenLabs`

Language learning platform

Language learning platform with a content management system.

Role: solo, the whole system

Work: the whole project: requirements analysis with the client, requirements, architecture and data model, testing

`Next.js · TypeScript · Supabase · PostgreSQL`

Loyalty management system

B2B admin system for loyalty programmes.

Role: lead frontend developer in a team

Work: working out the requirements, architecture and interface design, tasks for the backend developer, integration tests

`React · TypeScript · RTK Query · .NET · SQL Server`

EDUCATION

Vilnius University of Applied Sciences (Vilniaus kolegija), Software Systems, 2023-2027 (in progress)

Final thesis (in progress): “AI Agent for Creating Short-Form Vertical Videos Based on a Knowledge Base and Design Rules”
